

What is sight?

Sight takes place in the eye. People wear glasses or contacts to improve their eyesight so that they can identify and process specific details in the world around them.

What is vision?

Vision takes place in the brain. Good vision relies on the brain's ability to understand the information that comes in through the eyes and then respond.

What is ophthalmology?

Ophthalmology is the study of medical conditions relating to the eye.

What is an ophthalmologist?

Ophthalmologists are medical doctors who have undergone special training to diagnose and treat conditions involving the eyes and vision.
